Education

University of California, Riverside *Riverside, CA*
Master of Science in Computer Science and Engineering (GPA: 3.92 / 4.0) Sep 2025 – Dec 2026

- **President** of the Computer Science Graduate Student Association.
- **Data Researcher** for the Health, Well-being, and Safety Research team.

PES University *Bengaluru, KA, India*
Bachelor of Technology in Computer Science and Engineering (GPA: 3.69 / 4.0) Dec 2020 – May 2024

- Specialization in **Machine Intelligence and Data Science**.
- **Teaching Assistant** for **Object-Oriented Analysis and Design with Java**. See learning materials here.

Skills

Languages: Python, C/C++, Java, SQL, Terraform
Concepts: Operating System, AI/ML, Deep Learning, Relational Database, Agile, Cloud Computing (AWS), Generative AI, Large Language Models, Computer Vision, Data Science, Data Analytics, Data Visualization, Computer Networks, Graphs, Graph Database, Version Control, CI/CD

Experience

Salesforce *San Francisco, CA*
Software Engineering Intern Jun 2026 – Present

- Created an agentic workflow to automate Application Performance Monitoring enrollment, on track to save thousands of man-hours across the org.
- **Technologies**: TypeScript (Mastra), ElasticSearch, AWS, Terraform, CI/CD, Git

Nasdaq *India*
Software Engineer Jul 2024 – Sep 2025
Software Development Intern Jun 2023 – Jun 2024

- Jump-started a new ML-based Advisory Technology product as the primary **Python** developer: built a minimum viable product, presented it to product leadership, and took the project to prototype phase.
- Designed, developed, and maintained **microservices** for backend processes, and led the end-to-end **Python** process development–from prototype to production–implementing custom **named entity recognition**, **LLM** integration, fuzzy string-matching, and writing extensive Terraform for **AWS**-powered infrastructure.
- Architected and developed a new web-crawling pipeline using **Selenium WebDriver** and a custom **BFS**-based algorithm, improving mining speed by approximately **5x**.

StanceBeam *India*
Computer Vision Intern Jun 2022 – Aug 2022

- Created a device-agnostic formula to implement **stereovision** for depth sensing, built for a portable cricket decision review system.
- **Technologies**: OpenCV, NumPy, Python3

Projects

OpenGL Projects | *C++, GLUT*
A simple OpenGL physics engine, with collision handling, built under the guidance of Dr. Adithya Balasubramanyam. Also built a framework to create complex 3D assets from scratch (using only triangles).

Glaucoma Diagnosis from Retinal Fundus Images | *Python, TensorFlow, scikit-learn*
Evaluating popular **CNN** architectures and **histogram equalization**-based preprocessing techniques on classifying a retinal fundus image into normal or glaucomatous. See our results, read our preprint, or see my GitHub repo.

Diffusion Inference with Dynamic Classifier-free Guidance | *Published in IEEE (June 2024)*
Text-to-image generation models involve multiple inference steps and traditionally use a constant–classifier-free guidance scale–to set prompt adherence across steps. In this research, we proposed and evaluated Dynamic CFG.
